

Augment your analysts with unlimited intelligence for fast, detailed and accurate investigations

Your AI-Powered Security Solution

Security tools can make your team more efficient by generating alerts and flagging anomalies. But as devices and digital interactions increase, so does the volume of alerts, which need quick and thorough investigation.

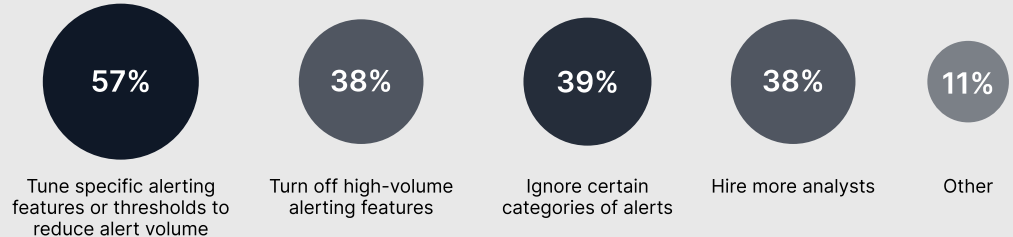

Eventually, the sheer number of alerts overwhelms security teams, risking missed threats and delayed responses. The evolving nature of cyber threats exacerbates this issue, leaving organizations vulnerable to attacks, data breaches, and significant financial and reputational damage.

Addressing this challenge is vital to maintaining digital asset security and stakeholder trust.

Challenge of Today's SOC

- Overwhelming alert volume
- Manual analysis is time-consuming (5 to 40 minutes per alert)
- Risk of overlooking genuine threats
- Constantly evolving cyber threats
- Limited Budget
- Shortage of Talent

If your SOC has too many alerts for the analysts to process, what do you do?

AI-driven, 24/7 alert investigation

DropzoneAI has the solution: Our specialized AI agent autonomously performs end-to-end investigations. Free your analysts to focus on critical projects.

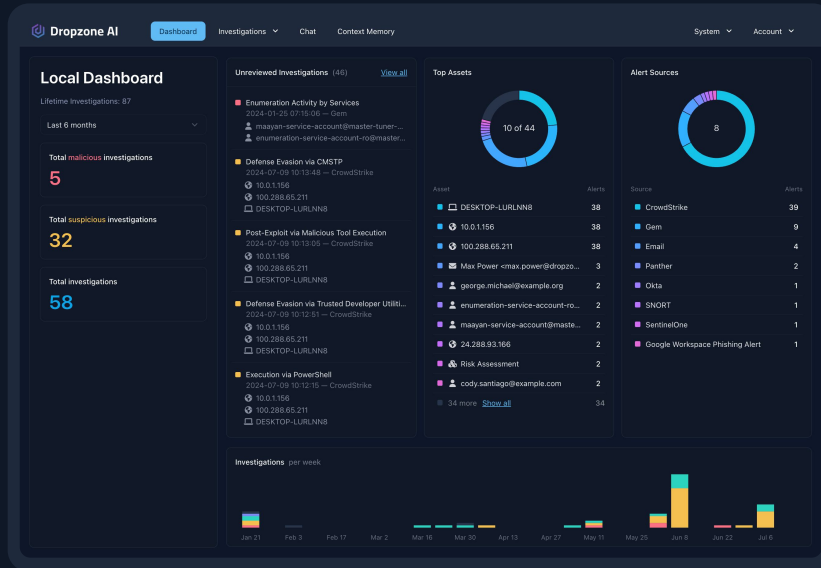

SOCs face multiple compounding challenges:

- Organizational context adaption
- Patented Large Language Model-based reasoning system
- Replication of Human Expert Techniques
- 30 min deployment
- Out-of-the-box automation with no playbook, code, or prompt required
- SOC analyst NLP chatbot that interprets and responds to queries in plain language

Our AI SOC Analyst Never Sleeps — So You Can.

Meet Our AI SOC Analyst

Augment your analysts with unlimited intelligence for fast, detailed and accurate investigations.

Comprehensive view for threat management across your digital infrastructure.

Why Dropzone AI

Purpose-built for autonomous expert cybersecurity reasoning, Dropzone's patented GenAI agent is self-adaptive and context-aware.

Seamless Integration within 30 Minutes

Empower your security team with AI-driven insights

10x the brainpower in the security team and get 24/7 alert investigation coverage for 100% of your alerts

Scan Here to learn more about how our AI SOC Analysts work

Features

- Autonomous Alert Investigation
- SOC analyst chatbot
- Organizational context adaption
- Patented Large Language Model-based reasoning system
- Replication of Human Expert Techniques
- 30 min deployment
- Out-of-the-box automation with no playbook, code, or prompt required

Benefits

- Focus on the real threats
- Reduction in Mean Time to Disposition (MTTD)
- Reduced Alert Fatigue
- Free your analysts for higher-value work
- Get more out of your security tooling
